Port of Spain 5g base station mobile query

Overview

Will 5G SA become a smart port?

For Javier Gallego, head of Technologies at the PAV, 'our 5G SA network is one of the fundamental pillars to achieve the goal of becoming a definitive smart Port, based on two pillars: security and mobility'. The solution will integrate market-leading technologies and solutions with a 5G private network core in its Stand-Alone (SA) mode.

What frequencies does Valenciaport 5G use?

Valenciaport's 5G network will use n40 frequencies, frequencies regulated by the public administration, thus ensuring the privacy of the network in the port area and allowing for customised security, controlling the devices that are connected.

What will 5G mean for the port of València?

According to the director of the Port Authority of València (PAV), Enrique Belda, '5G will allow us to configure the technological future of the Port of València, a future that will provide advanced connectivity for the improvement of innovation and the definitive digital transformation'.

What is a 5G ran solution?

The solution will integrate market-leading technologies and solutions with a 5G private network core in its Stand-Alone (SA) mode. It will include the core network as well as the RAN (Radio Access Network) and routing/switching elements.
