Power Station Battery Generator

Overview

What is a portable power station?

A portable power station is a small battery storage generator that can be charged and provides power where and when you need it. This makes them good off-grid power sources when you need backup power during a power outage, are heading into the wilderness, or are working remotely on a job site.

What is the difference between a generator and a portable power station?

A portable power station is essentially a big rechargeable battery that you carry around. Deplete it, and it's useless until you can recharge. A generator, by definition, is a device that actually converts some type of energy to usable electricity in whatever circuitry you have it connected to.

How much does a portable battery station cost?

Review: This portable battery station can power your home for 2 weeks. This is a really big setup, so while it's not for everyone, it without a doubt represents the ultimate in portable power storage. And I remember when this was a \$5,000 investment, but right now the price has been slashed by 40%, so you can pick one up for around \$2,500.

Can a portable power station be turned into a solar generator?

Using DJI's solar panels, you can turn your portable power station into a solar generator. This setup provides all the unlimited energy the sun has to offer, without the noise, pollution or recurring fuel payments associated with a traditional generator.
