What is the difference between a switch and a circuit breaker?

Switches are typically used for turning power on and off to particular devices. Circuit Breakers, on the other hand, serve the purpose of circuit protection in the event of overcurrent or electric leakage. Terminal blocks consist of multiple terminals for connecting, joining or branching the flow of electric current.

What is a circuit breaker used for?

They automatically interrupt the flow of electricity when a fault is detected, preventing potential fires and equipment damage. Circuit breakers are used in residential, commercial, and industrial settings to ensure electrical safety and reliability. What should I consider when buying a used circuit breaker?

.

What are enclosed circuit breakers & Auto resetting circuit breaker?

Our Enclosed Circuit Breakers are securely housed in metal or plastic casings that protect the breakers from dust, water or external force. Our Auto Resetting Circuit Breaker serve the purpose of restoring power supply in the event the breakers trip falsely due to lightening surge or radio wave.
