Purchase of 150-foot folding containers for oil refineries

Overview

What is a crude oil storage tank?

A crude oil storage tank is a container for storing crude oil or other petroleum products, usually can be found in refineries, oil fields, oil depots, and other industries. At present, 100,000 m³ crude oil storage tanks are the main container to storage crude oil all over the world.

How many m³ crude oil storage tanks are there?

At present, 100,000 m³ crude oil storage tanks are the main container to storage crude oil all over the world. Storage tanks should not be built on the foundation with different hardness, or within the impact range of active geological fault zone.

Why do modular refineries need to be shipped separately?

For the largest Modular Refineries some components (such as crude distillation columns) are too large to mount on skids and must be shipped separately. Before shipping and while still in our factory, we preassemble all of these components directly to the modularized process systems so field assembly is short and efficient.

What is the scale of crude oil storage tanks?

At present, the development trend of crude oil storage tanks scale is larger and larger. The largest crude oil tank in the world is 250,000 m³, 100,000 m³ crude oil storage tanks have been common and they will be the main size now or in the future. We can fabricate crude oil storage tanks with capacity larger than 1,000m³.
