

Rooftop solar system equipment

Overview

What is a rooftop solar photovoltaic system?

A rooftop solar photovoltaic (PV) system uses solar panels mounted on the roof of a building to convert sunlight into electricity. Rooftop solar systems rely on the photovoltaic effect, where cells generate electricity in response to sunlight.

What components make up a rooftop solar PV system?

The components which make up a rooftop solar PV system are: 1] Solar Panels: These devices are commonly made from silicon and are comprised of multiple solar cells which absorb sunlight and use the energy from the sun, photon energy, to generate electricity.

What types of structures are suitable for rooftop solar panels?

Structures with smaller roofs, like sheds, cabins, and RVs, are all good candidates for rooftop solar panels. Rooftop solar PV systems are able to power a range of appliances, from washing machines to computers.

Are rooftop solar systems high maintenance?

No, rooftop solar systems are not high maintenance because they only need to be cleaned twice a year. Most debris on roof-mounted solar panels slides off naturally or is washed off by rainfall. Is it worth it to install Rooftop Solar PV Systems?
