# Service 5g base station electricity installation

## Overview

---

How can a 5G base station be truly global?

To develop truly global 5G coverage, base stations will need to be installed across the world in some extremely inhospitable environments. This means that the new generation of base stations needs to be designed with environmental challenges and extreme weather in mind, such as the effects of humidity, heat and wind.

What is 5G integration?

Until recently, 5G integration has primarily focussed on large-scale base stations and buildings, but the next stage will focus more on smaller-scale sites that can fill the gaps in network coverage. Anyone with the technical know-how to adapt 5G architecture to these less conventional sites will likely gain a.

Should a 5G base station be able to withstand a hot climate?

Both the 5G cells and the base station should remain functional even when subjected to severely wet and humid conditions. Even in extremely hot climates, 5G components must remain reliable, stable and energy efficient to prevent downtime, malfunctions and reduction in lifespan.

How can Ericsson make my 5G radio site more energy efficient?

Find out how Ericsson can make your 5G radio site become more energy efficient, sustainable and environment friendly. This is enabled by carefully selecting and developing the most sustainable, robust and energy efficient products and solutions to ensure years of effective operation.
