# Several 12v solar container lithium battery packs connected in series

## Overview

How to connect lithium solar batteries in series?

Connecting Lithium Solar Batteries in Series: To connect lithium solar batteries in series, you simply link the negative pole of one battery to the positive pole of the next battery. This ensures that the same current flows through all the batteries. The total voltage of the series connection is the sum of the individual voltages.

Should you connect lithium solar batteries in series or parallel?

In a parallel connection, the capacity increases while maintaining the same voltage, ideal for longer run times. When setting up lithium solar batteries, understanding how to connect them in series or parallel is crucial for maximizing efficiency and performance. Below, we delve into the specifics of each configuration.

What is the purpose of connecting lithium solar batteries in series?

The main purpose of connecting lithium solar batteries in series is to increase the output voltage. By adding up the voltages of the individual batteries, you can power devices that require higher voltage amounts. For example, connecting two 24V 100Ah batteries in series will result in a combined voltage of 48V while maintaining the same capacity.

How to connect 12V lithium batteries in series?

To safely connect 12V lithium batteries in series, the following options should be considered: Customized high voltage protection board: 48V system requires a protection board with a voltage of at least 80V, and the MOSFET selection must match the total voltage.
