Solar AC System

Overview

What is a solar AC system?

Most solar AC systems are hybrid, meaning they use traditional electricity sources in addition to solar power. Hybrid systems are more popular in very hot environments where it's necessary to run the AC at night (when there's no sun) to keep comfortable. For complete off-the-grid air conditioning, there are solar-only systems.

What is a solar powered air conditioner?

AC solar powered air conditioners are also called inverter air conditioners. An inverter must be used with these systems to convert DC current to AC current. Batteries can be used in AC systems to store excess sun energy. Your other option, if you are on the grid, is to tie the panels into your electrical panel.

How does a solar AC work?

In simple terms, solar ACs use solar panels to power the air conditioning system. Solar panels collect energy from the sun. They convert this energy into power. That power either goes directly to the air conditioner or to a battery where it's stored until the AC needs it.

Can a solar AC unit use grid energy?

It can use the grid energy, though, if needed. The solar AC units collect energy in two ways: photovoltaic (PV) systems or solar thermal systems. Solar PV systems use photovoltaic panels to generate electricity, while solar thermal systems work like solar water heaters.
