Solar Generator Hybrid System

Overview

What is a solar generator hybrid?

With a solar generator hybrid, if there are periods of limited sunlight, the diesel generator will kick in and makes up for what the solar system is lacking in terms of producing power. The solar panels used don't have to be as large as they would be if it was solely a solar generator.

What are solar hybrid power systems?

They are called hybrid power systems because power generation occurs via multiple sources of energy. We are going to talk about different types of solar hybrid power systems in this post to provide a convenient platform for our customers to find solutions to their renewable energy problems and also to get a good grasp of what they are dealing with.

How does a hybrid generator work?

When solar production is insufficient—such as during cloudy days, nighttime, or periods of high energy demand— the generator automatically starts to provide additional power. Modern hybrid systems are equipped with smart energy management software to switch between solar and generator power as needed.

Are hybrid solar generators sustainable?

Our bio-solar-hybrid generators are more sustainable than conventional diesel generators and hybrid diesel-battery generators. When the sun is not shining, our generators automatically switch from solar to battery and then to bio-diesel genset. This way, we make sure you always have power.
