

Solar installation on glass tile roof

Overview

How do I install solar panels on a lightweight tile roof?

The best way to install solar panels on a lightweight tile roof is through a method called inset solar installation, also known as a “comp-out” installation. This technique removes the section of tile where the solar panels will be installed and replaces it with composite shingles before mounting the solar array.

Can solar panels be installed on a tile roof?

Yes, solar panels can be installed on a tile roof. In fact, companies have developed methods to install solar panels on tile roofs. Before installation, there's a pre-installation or preparatory stage to consider.

How do you install solar panels on a new roof?

Mounting the solar panels – Once the new roof section is complete, a solar expert installs the racking system and solar panels securely onto the composite shingles. Unlike tile, these shingles can handle the weight and pressure of solar mounting without breaking.

Can solar be installed on clay tiled roofs?

Clay tile roofs, which are common in the American southwest, can be a challenge for solar installers. While they have cultural significance and longevity, installing solar panels on them has historically been more expensive and risky than other roof types.
