What is a solar inverter?

A solar inverter is vital to a solar photovoltaic (PV) system. Its primary function is to convert the direct current (DC) output generated by the solar panels into alternating current (AC) that is suitable for use by a local, off-grid electrical network and/or can be fed into a commercial electrical grid.

Can a solar inverter power a home?

Without a solar inverter, you wouldn't be able to use those solar panels to power your home. A solar inverter's job is simple: It converts the direct current -- the electricity generated by your solar panels -- into alternating current electricity that your appliances run on.

How does a solar inverter work?

A solar inverter's job is simple: It converts the direct current -- the electricity generated by your solar panels -- into alternating current electricity that your appliances run on. Selecting the right solar inverter for your home is tricky, but most solar installers usually handle the task, meaning you likely won't have much choice.

How much does a solar inverter cost?

Here's an estimated replacement cost for a solar inverter: String inverters are the more affordable option for PV system owners to consider. This type of inverter operates by gathering DC from a sequence of solar panels, known as a 'string'. The solar inverter replacement cost generally ranges from R10,000 to R30,000.
