Solar inverter laid flat

Overview

Can solar panels be mounted on a flat roof?

This means there are two different mounting systems to help ensure you get the best out of your solar panels on a flat roof. A mounting system is critical for solar panels on a flat roof, as by using a framing system, the panels can be tilted toward the sun, enhancing their efficiency.

Can solar panels lie flat?

Technically, solar panels can lie flat, but this is not recommended. Laying panels flat reduces their exposure to sunlight, significantly decreasing their efficiency. Flat panels are more prone to dirt and debris accumulation, as rainwater won't naturally wash them clean. Panels laid flat will therefore require regular cleaning.

Should I Tilt my solar panels if I have a flat roof?

So, please, if you have a flat roof, tilt your solar panels at least 10°, ideally in an east-west, back-to-back arrangement. Your panels and your electricity bill will thank you even if your local solar panel cleaning company won't. Sparkling clean, East-West tilted solar panels on a tricky flat roof.

Are flat solar panels filthy?

These flat solar panels are flat-out filthy. It makes perfect sense that every shower of rain should rinse your panels clean, not concentrate dirt on them. Even the most disciplined and fastidious hose owner isn't going to specifically clean their panels every week.
