# **Solar lights or household lights**

## Overview

---

What are solar home lights?

Solar home lights are a modern way to power your home. In a home solar lighting system, the solar panel is usually installed on the roof of a home. During the day, the solar panel generates electricity and stores it in the solar battery.

What type of lighting can you use with solar lights?

You can use uplighting, downlighting, moonlighting, silhouetting, path lighting, and doorway lighting with solar lights. The installation of solar lights does not require you to dig through your garden to install electric cables. Also, there are no longer live wires left hanging around.

Why do people use solar lights?

Rechargeable batteries store this energy and, as a result, power the lights at night or during periods of low sunlight. People primarily use solar lights for outdoor lighting, such as walkways, gardens, patios, and landscaping. Additionally, they use them for street lighting, emergency lighting, and in remote off-grid areas.

Are solar lights a good choice for your home?

Solar lights are a good option for your home as they are self-contained units independent of the grid. They are not affected by power outages and ensure that you have the power needed to illuminate outdoor spaces at night.
