Solar panels are installed on the roof to protect against rain

Overview

Can solar panels withstand rain?

Most solar panels are designed to withstand rain and other weather conditions, but it is still important to take steps to protect them. Solar panels can be damaged by heavy rains or hail, so it is important to have a plan in place to protect them. There are a few different ways that you can protect your solar panels from rain damage.

Do solar panels damage a roof?

Ultimately, photovoltaic panels won't damage your roof — they'll actually protect it from the elements, including rain, snow, and, of course, sun. That's especially true if your roof has shingles, which tend to get sunbleached over time. [How Are Solar Panels Installed on an Old Roof?](#)

.

Do solar panels protect your roof?

On the sunny side of things (pun intended), solar panels protect your roof from sun damage over time. Sun rays and intense heat wear down your shingles, lighten their color, and make them more brittle over time. In contrast, solar panels thrive on sunlight. By covering your roof with the solar panels, you naturally protect the underlying shingles.

Can solar panels be installed on a roof?

Solar panels offer a sleek, attractive design that can be installed on any type of roof. Open tube panels prevent moisture build up, keeping the roof surface dry. If you live in a region that experiences heavy wind or snow, solar panels are even weather-tested to handle harsh conditions.
