Solar panels are priced by wattage

Overview

What is solar cost per watt?

To begin with, the cost per watt is a fundamental metric that reflects the price of solar panels divided by their total output capacity in watts. This figure provides a clear picture of the efficiency and value of the solar system being considered.

How much do commercial solar panels cost?

Generally, installing solar panels on businesses costs a bit less per watt because the systems are larger, but the total costs will be higher. In 2025, the average cost for commercial solar panels is just about \$2.00 per watt. There is a lot to consider when figuring out how much you'll spend on a solar installation.

Why do solar panels cost more than a Watt?

For instance, commercial installations or large residential systems can negotiate better pricing due to the volume of panels purchased. Conversely, smaller installations may face higher costs per watt because the fixed costs associated with installation, such as labor and permitting, are spread over fewer panels.

How much does solar cost?

After applying the 30% federal tax credit, net costs typically range from \$10,500 to \$24,500. Understanding solar costs requires grasping two key metrics: cost per watt and cost per kilowatt-hour (kWh).
