Solar panels for Liberian households

Overview

How much solar energy does Liberia have?

This high and consistent potential for solar energy across the country adds to an average level of 1,712 kWh/m²/year, which could generate 1,400 to 1,500 kWh/kWp. Some 43% of the land is covered with forests (41,790 square kilometers, World Bank 2015), thus there is no lack of trees in Liberia.

What is Liberia's sustainable power?

Liberia's Sustainable Power. We harness the most valuable resource in rural areas —tight-knit communities — to provide life-changing products and services, starting with access to solar electricity. Electricity creates opportunities — opportunities to learn, communicate, start a business, and build a better life.

How much solar radiation does Liberia have?

In Liberia, monthly solar radiation on horizontal surface ranges from about 4 kWh/m²/day during the rainy season in June, July, August to 6 kWh/m²/day during the height of dry season in February and March.

How many rural Liberians have access to electricity?

Less than 1% of rural Liberians have access to electricity even though reliable, safe electricity is now affordable for nearly anyone. We aim to serve the remaining 99% Community Focused By focusing on tight-knit communities, we maximize repayments through social pressure and minimize costs through economies of scale.
