Solar panels in rural areas of the UK

Overview

Are rural areas leading the way on solar power generation?

New CPRE analysis reveals that homes in the countryside are leading the way on solar power generation. 48 of the 50 English parliamentary constituencies with the highest domestic solar generation capacity are in rural areas, while all 200 of those with the lowest are in towns and cities.

Is the UK a good place for solar panel use?

Contrary to popular belief, the UK has more than enough sunlight to power solar panels. It receives the same amount of solar energy as certain areas in France or Spain, which are known for their Mediterranean climate.

Which areas are most likely to have solar panels?

Fewer flats: Areas with fewer flats are much more likely to have solar panels. Rural location: Rural locations appear to be more likely to have solar panels compared to urban areas. Age: Areas with a more residents older than 65 are more likely to have solar panels on their homes.

How many homes in the UK have solar panels?

Approximately half a million homes in the UK have solar panels installed (as of the end of 2013), and each week an additional 1900 are reportedly added. Most people asked about green energy technologies would probably mention solar panels and wind farms.
