

# Solar power generation 20 energy storage

## Overview

---

Why is solar PV taking over the energy industry?

In all areas: electricity generation growth, installed capacity growth, and cost competitiveness, solar PV domination is now overwhelming. And solar PV takeover is accompanied by the timely meteoric rise of battery storage, which cumulative installed capacity likely overtook that of pumped hydro storage last year.

Is solar photovoltaic the new cornerstone of the global power sector?

In the past three months, the International Energy Agency, the International Renewable Energy Agency, and BloombergNEF published preliminary data for the power sector in 2024. These data hammer the same powerful message: solar photovoltaic (PV) has become the new cornerstone of the global power sector.

Which country will have the highest energy storage capacity by 2026?

From an international perspective, the IEA estimates that China will have the highest installed electrochemical energy storage capacity by 2026, accounting for 22% of the global total. By then, China will be on a par with Europe and outstrip the US by 7 percentage points (Figure 5). 2.

How big will electrochemical energy storage be by 2027?

Based on CNESA's projections, the global installed capacity of electrochemical energy storage will reach 1138.9GWh by 2027, with a CAGR of 61% between 2021 and 2027, which is twice as high as that of the energy storage industry as a whole (Figure 3).
