# **Solar power generation system in the UK**

## Overview

---

Are solar farms generating more electricity in the UK?

Solar farms and rooftops in the United Kingdom generated a record 42 percent more electricity from January through May 2025 than during the same period in 2024, according to a new analysis by Carbon Brief. The UK also just had its sunniest spring since record keeping began in 1910, the Met Office said.

What percentage of UK electricity is generated by solar?

In total, solar accounted for 11.6% of UK electricity generation in May 2025, only the fourth time it has ever breached the 10% threshold, after June 2023, June 2024 and April 2025. (Solar topped 10% of monthly global electricity generation for the first time in April this year.).

How has solar power benefited the UK?

So far, this year's solar electricity output in the UK has avoided gas imports of roughly \$813.9 million, which would have released approximately 6.61 million tons of carbon dioxide. Though this year's solar record was driven partially by the sunniest spring on record, rising capacity also helped.

When did the UK get the most solar power?

The highest UK solar output on record was reached at 13:00 on 6 April, when the technology was delivering 13.2GW of power and meeting 40% of demand for that half-hour period. The UK saw 653 hours of sunshine in the period from 1 March to 31 May 2025, making it the sunniest spring since records began in 1910, according to the Met Office.

## Solar power generation system in the UK

The UK's solar farms and rooftops generated more electricity than ever before in the first five months of 2025, as the country enjoyed its sunniest spring on record. The figures, ...

Insights & Projections of UK Solar Power Growth Astonishingly, the solar capacity in the UK had increased from 5,488.6 MW in 2014 to 13,259 MW in June 2019. On top of that, ...

The government aims to increase UK solar capacity to 45-47GW by 2030 to meet its goal of 95 per cent of generation coming from clean power sources by then.

Great Britain achieves new maximum solar generation record On 1 April, between 12:30 and 13:00, Great Britain secured a new maximum solar generation record of 12.2GW.

As solar energy continues to play a pivotal role in the UK's energy strategy, this record

generation marks an important point in the transition towards a greener, more sustainable future. ...

Solar farms and rooftops in the United Kingdom generated a record 42 percent more electricity from January through May 2025 than ...

The UK Solar Roadmap issued by the UK Government and produced through collaboration with industry presents a comprehensive strategy and clear plan of action to ...

Solar photovoltaic is a renewable energy technology that utilizes sunlight in order to generate electricity. A photovoltaic system is ...

Renewables accounted for majority of annual UK electricity generation for the first time in 2024, with solar enjoying record highs despite fewer sun hours Gains for PV reflect ...

The government aims to increase UK solar capacity to 45-47GW by 2030 to meet its goal of 95 per cent of generation coming from ...

Insights & Projections of UK Solar Power Growth Astonishingly, the solar capacity in the UK had increased from 5,488.6 ...
