Solar power station for home in Australia

Overview

What is the best solar system size in Australia?

The most popular household system sizes in Australia are a 6.6 kW system and an 8kW solar system. Both systems produce enough to power a home and in most cases a battery too. Your personal circumstances will influence the best system size for your household.

How does a solar inverter work in Australia?

But homes in Australia run on alternating current (AC)—so that's where the inverter comes in. It converts the solar power into a form that your appliances can use. Once that conversion happens, the electricity flows into your home and powers whatever's running—lights, fridge, washing machine, etc.

How much does solar energy cost in Adelaide?

Obviously, you have to pay for any imported energy. In Adelaide, I pay anywhere from 17 cents to 50 cents for grid electricity depending on the time of the day, and get 5 cents for exported solar energy. This means my self-consumed solar power is at least three times as valuable as exported solar electricity.

How does a home solar system work?

Understanding how a home solar system works is key to making an informed decision about installing solar panels. At its core, a solar system converts sunlight into electricity that powers your home.
