Solar power station portable in Finland

Overview

How will a hybrid energy system work in Finland?

In Finland, a number of hybrid projects are in the pipeline, combining wind, solar and also energy storage. These solutions will balance our energy system. On a global scale, solar power is one of the fastest growing forms of energy generation – its size and importance in the world’s energy mix is huge, larger than wind power.

Does Finland need wind power?

In addition to wind power, we also need plenty of solar energy, for which Finland has excellent prospects. Solar power is particularly well suited as a counterpart to wind power. These two emission-free energy sources complement each other: solar energy is available in summer and during the day, while the highest winds occur on average in winter.

How solar energy is used in Finland?

Solar energy can be used in different forms. It can be used as a form of electricity or concentrated and stored in batteries or thermal sources. Finland is one of the avid users of solar-powered energy for different purposes. In this write-up, we share the biggest solar projects and farms in Finland.

Is solar power a real thing in Finland?

Many Finns are already familiar with solar power: solar panels can be found on the roofs of many homes, summer cottages and workplaces. As technology develops, industrial-scale solar power production is also becoming more common in Finland. Finland is undergoing a major energy transition.
