What is battery energy storage in South Africa?

In South Africa, Battery Energy Storage is a key aspect of the first-of-its-kind hybrid project, Oya. Straddling the Western and Northern Cape Provinces, the hybrid facility will offer 86MW wind and 155MW Solar PV dispatchable power, coupled with 92MW/ 242 MWh battery energy storage.

How much does a battery storage project cost in South Africa?

The commitment to battery storage solutions is becoming increasingly significant as South Africa faces ongoing energy challenges and seeks to augment the integration of renewable power sources. The estimated cost of the Mogobe BESS project stands at ZAR 3bn (US\$170m), with the primary funding — about 90% — sourced from non-recourse project debt.

Why is energy storage important in South Africa?

But as South Africa changes its model for producing and distributing electricity, the demand for energy storage solutions is likely to rise. As coal-fired power plants are decommissioned and renewable energy sources – typically intermittent – are increasingly adopted, reliable and efficient energy storage is coming more and more to the fore.

Does Scatec have a solar-plus-storage site in South Africa?
