South Sudan Base Station Power Load

Overview

What is the grid-based electricity situation in South Sudan?

At present, the grid-based electricity situation in South Sudan is characterized by routine power outages and lack of efficiency in the distribution system. In fact, in 2020, 580 GWh or nearly 100 % of electricity was produced from oil and gas, and just 1 GWh from renewable sources.

Is biomass a source of electricity in South Sudan?

Traditional biomass – the burning of charcoal, crop waste, and other organic matter – is not included. This can be an important source in lower-income settings. South Sudan: How much of the country's electricity comes from nuclear power?

Nuclear power – alongside renewables – is a low-carbon source of electricity.

What are the main energy sources in South Sudan?

The most commonly-used energy sources are biomass and petroleum products. Forests, animal wastes, agricultural residues, and sugar cane are all biomass resources in South Sudan. The country's reliance on oil pervades all aspects of the economy, accounting for roughly 72 % of the 700 Ktoe total primary energy supply.

How much power does South Sudan have?

For instance, the national capital region has a high percentage of hydropower, which makes it simple to connect to the existing transmission lines. About 130 MW of South Sudan's installed power capacity will be operational by 2025, a portion of which will be used to power the nation's numerous oil fields.
