## Overview

---

A typical 400-watt solar panel is 79.1 inches long and 39.1 inches wide. It takes up 21.53 sq ft of area. How big is a 400W solar panel?

The area of a 400W solar panel is around 2.2 square metres. It is a slightly larger size than the 300W panel and is suitable for small commercial applications as well as small-scale residential applications. It is a good size for those that need a larger system, but not too big for their rooftop.

What is the difference between a 400W and 450W solar panel?

Panel "Size" vs Physical Dimensions: The most critical distinction for homeowners is that solar panel "size" refers to electrical output (measured in watts), not physical measurements. A 400W panel has the same physical footprint whether it produces 350W or 450W - the difference lies in cell efficiency and technology.

What are the key features of a 400 watt solar panel?

A typical 400W solar panel size measures between 1,720-1,762 mm in length and 1,134 mm in width, with a surface area of about 2 square meters. These average solar panel sizes make them suitable for various applications, from rooftop installations to portable solar kits for sheds or RVs.

How many 400 watt solar panels do I Need?

The number of 400-watt solar panels you need depends on the size of your home and how much electricity you consume. Here's how to calculate: Small Home (1-2 people): Generally, a 400W solar panel system will be enough for a small home that uses about 6-8 kWh per day. You would need approximately 5-6 panels.
