Super Farad capacitor minimum temperature

Overview

How long does a super capacitor last?

The life of supercapacitors will double for every 10°C decrease in temperature or voltage by 0.1V. Supercapacitors operated at room temperature can have life expectancies of several years compared to operating the capacitors at their maximum rated temperature. L1= Load life rating of the super capacitor (typically 1000 hours at rated temperature).

What temperature should a supercapacitor be rated at?

The standard temperature rating for Eaton supercapacitors is -25 °C to +70 °C. Temperature in combination with voltage can affect the lifetime of a supercapacitor. In general, raising the ambient temperature by 10 °C will decrease the lifetime of a supercapacitor by a factor of two.

What is the temperature range of kamcap supercapacitor 3V?

Kamcap 's supercapacitor 3V series is available in temperatures ranging from -40 to +65 °C and is suitable for long-term stability in high pressure environments. SE/HE series kamcap super capacitor products use a temperature range of -25 ° C ~ 70 ° C low leakage, suitable for long-term continuous discharge of small current.

Can a supercapacitor be operated out of a specified range?

Fig. 1 Example of Derating Temperature and Voltage to Extend Lifetime. Abracon does not recommend operating supercapacitors out of their specified ranges. For example, designing a 0-700C supercapacitor into a system that will experience 850C ambient temperature is not recommended, regardless of whether the temperature increase is temporary.
