# The more solar panels the better

## Overview

---

Are solar panels better than batteries?

Solar panels have a longer lifespan (25-30 years) compared to batteries (10-15 years). This means that your solar system will continue to generate electricity long after the battery warranty has expired. When considering the long-term investment, factoring in the potential need to replace batteries earlier than solar panels should be considered.

Why should you install more solar panels?

All things being equal, installing more solar panels generally provides more benefits in terms of energy generation, long-term cost savings and overall efficiency. Solar panels have a longer lifespan than batteries and directly contribute to generating clean, renewable energy for your home.

Should I add more solar panels or batteries to my home energy system?

To understand whether it's better to add more solar panels or batteries to your home energy system, it's a good idea to know exactly how these devices work individually and together. Solar panels convert sunlight into electricity, which can be used to power your home directly.

Why should you choose a solar panel for your home?

Limited roof space – The number of panels that can be added may be restricted by the available roof space. Increased energy storage – More batteries means you can store more energy. This means you can run your home for longer periods of time just from the battery. If paired with solar panels, this is the cheapest electricity you can get.
