Tool Battery Car

Overview

How do you connect a tool battery to a car?

Use the alligator clips to connect to the accessory lug on the positive battery terminal, and the negative can clip onto a stud or bolt on the engine. Once connected, get in your car and start it. Then quickly disconnect the tool battery. Once the leads are pulled from the battery, take it with you in case you need to jump start it again.

How long should a tool battery be connected to a car?

Don't leave the tool battery connected to your car for any longer than absolutely necessary. I have Milwaukee cordless tools which use 18-volt batteries—that's about 3 volts more than your car's alternator generates to charge the battery.

What kind of battery does a Power Tool use?

Power Tool Batteries: The Parkside PAPK 12 A1 12V 2Ah Battery is currently sold out.

Should I use a cordless tool battery to start my car?

Getting keys, cables, moving my truck—or getting the charger and extension cord out—starting the car, then putting everything away, eats up more time than you think. With the prospect of getting to work late, I opted for a third option—using a cordless tool battery to start my car.
