# Total investment in Norway solar glass project

## Overview

---

How much solar power does Norway have in 2023?

In 2023, solar PV provided 1% of the electricity into the Finnish grid (Electricity Maps, 2024). Norway, having had plenty of hydropower, only recently began to tap into solar energy. The Norwegian Water Resources and Energy Directorate (NVE, 2024) reported a total installed capacity of around 0.6 GW by the end of 2023.

Can Norway's buildings generate enough solar energy?

A new study has revealed that Norway's buildings could generate enough solar energy to meet nearly half of the country's annual electricity demand.

How much solar power does Norway have?

The Norwegian Water Resources and Energy Directorate (NVE, 2024) reported a total installed capacity of around 0.6 GW by the end of 2023. About half of the capacity is installed on households - the rest for industrial and commercial use, with a very limited Utility scale solar.

Is solar energy a key player in Norway's climate strategy?

The findings suggest that while the technical promise of solar energy in Norway is substantial, achieving it will require coordinated investment in infrastructure and policy. The report positions solar energy not just as a complementary force to Norway's hydropower dominance, but as a key player in the country's broader climate strategy.
