

# **Total number of wind power stations in China s mobile energy storage sites**

## Overview

---

Does China have a wind energy sector?

From steppe to power source, China's wind energy sector is revolutionizing the country's electricity supply and taking on a global leadership role. With its vast landmasses in the north and an extensive coastline, China has optimal conditions for generating wind power.

Which regions in China have the most energy storage capacity?

Geographically, the top five provincial-level regions in China for cumulative installed capacity of new energy storage are Inner Mongolia, Xinjiang, Shandong, Jiangsu, and Ningxia.

How big is China's pumped-storage capacity?

China's pumped-storage capacity is set to increase even more, with 89 GW of capacity currently under construction. Developers are seeking governmental approvals, land rights, or financing for an additional 276 GW of pumped-storage projects, according to the data from Global Energy Monitor. Pumped storage is a type of energy storage.

How big is China's energy storage capacity?

The most notable finding: by the end of 2024, China had reached 73.76 GW / 168 GWh in cumulative new energy storage capacity—an increase of more than 130% year-on-year. This figure accounts for over 40% of the global total, consolidating China's leading position in the international NES market.

## Total number of wind power stations in China s mobile energy storage

Pumped storage is a type of energy storage.

The most notable finding: by the end of 2024, China had reached 73.76 GW / 168 GWh in cumulative new energy storage capacity--an increase of more than 130% year-on-year. This figure accounts for over 40% of the global total, consolidating China's leading position in the international NES market.

China's new energy storage capacity exceeded 100 GW by June 2025, with total installations reaching 164.3 GW, surpassing pumped hydro additions amid accelerating ...

China's new energy storage sector continued its strong growth in H1 2025, with installed capacity reaching 94.91 GW and 222 million kWh, up about 29% from the end of 2024.

China's pumped-storage capacity is set to increase even more, with 89 GW of capacity

currently under construction. Developers are ...

Power Mix & Power Generation Mix of China in 2022 By the end of 2022, China's power capacity reached 2560 GW, of which renewable energy capacity reached 1210 GW, ...

From steppe to power source, China's wind energy sector is revolutionizing the country's electricity supply and taking on a global leadership role. With its vast landmasses in the north ...

The China New Energy Storage Development Report 2025 represents a major milestone in the institutionalization of NES planning and governance in China. By quantifying ...

"China's advances in new-type energy storage are moving from isolated breakthroughs to a more systematic framework," said Rao Hong, chief scientist at China ...

The China New Energy Storage Development Report 2025 represents a major milestone in the institutionalization of NES planning ...

The new energy storage market in China has great development potential in the future. The cumulative installed capacity of new energy storage in China is expected to exceed ...

BEIJING, Jan. 24 -- China's new energy storage sector has seen a rapid growth in 2024, with installed capacity surpassing 70 million kilowatts, said an official with the National Energy ...

The new energy storage market in China has great development potential in the future. The cumulative installed capacity of ...

Overview of China's Power Sector H12025 Proportion of non-fossil power capacity

reached 60% for the first time by the end of May Over 40% of the world's battery energy  
...

China's pumped-storage capacity is set to increase even more, with 89 GW of capacity currently under construction. Developers are seeking governmental approvals, land ...
