**UPS uninterrupted power supply long battery life**

## Overview

---

How long does an uninterruptible power supply last?

Like all other IT equipment, an uninterruptible power supply (UPS) has a finite lifespan. The average expected lifecycle of a UPS is eight-to-ten years. The batteries typically need to be replaced at least three times during that lifespan. Of course, once a UPS reaches the end of its lifespan, it should be replaced to mitigate downtime.

How long do UPS batteries last?

In this way, the UPS batteries prevent dirty power from reaching sensitive electronic equipment — which is especially important in rural areas and other environments where the power supply is often unstable. Most UPS batteries have a life expectancy of three to five years when operating under ambient conditions — 68 to 77 degrees Fahrenheit.

Are You overestimating your UPS battery life?

It's not just downtime but missed revenue, compromised safety, and a potential compliance nightmare. An Uninterruptible Power Supply (UPS) gives you precious minutes — or hours — to respond before systems go dark. But UPS battery life isn't one-size-fits-all, and overestimating it can lead to costly surprises when the lights go out.

How long can a ups last without power?

Discover how long a UPS can last without power—from 1 to 8 hours! Learn about UPS battery life, runtime, and factors affecting performance.
