Uninterruptible power supply for Swedish factory

Overview

What is a Mitsubishi Electric uninterruptible power supply (UPS) system?

Mitsubishi Electric uninterruptible power supply (UPS) systems provide daily power conditioning as well as backup power in the event of an outage to reduce damage to manufacturing equipment and maintain uptime for your production line.

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) can support power-heavy devices and ensure sustained access to a power supply in the event of a power outage. During power failures, an industrial UPS power backup can provide critical infrastructure with enough power to operate and backup data until the restoration of the main power supply.

Why do you need an uninterruptible power supply system?

Uninterruptible power supply systems can reduce downtime (and its cost) in manufacturing by providing reliable backup power in an emergency. A UPS allows your systems to shut down slowly, in alignment with standard procedures, as opposed to the rapid shutoff of an outage, which could damage the equipment.

What is uninterruptible power?

In larger installations, uninterruptible power is much more than a small-scale battery UPS that keeps an alarm system running for an hour or two despite a power cut. Redundancy in the form of backup power systems is not uncommon when the need is greater.
