# Uninterruptible power supply that can work 24 hours

## Overview

---

How do uninterruptible power supplies work?

Uninterruptible power supplies (UPS) automatically test their batteries regularly, typically every 24 hours, by placing a load on the battery set and monitoring the discharge performance. This is how they work.

How long do uninterruptible power supplies last?

Most uninterruptible power supplies have a lifespan of around 3-5 years (which the warranty will normally cover) and after that they're toast. This lifespan can be even shorter if you use the battery backup frequently. You can buy replacement batteries direct from the manufacturer and replace them yourself, extending the lifespan of the product.

What is a good uninterruptible power supply (UPS)?

A good UPS for gaming computers or high-power computers with two monitors would have a 500-1000 VA capacity. For additional peripheral units, consider UPSs with a capacity higher than 1000 VA. Another important characteristic is UPS wireless productivity.

Where can I find an uninterruptable power supply?

Search Newegg.com for uninterruptable power supply. Get fast shipping and top-rated customer service.
