# **Wellington portable ups uninterruptible power supply**

## Overview

---

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS), is an easy-to-install device designed to provide backup power to computers, servers, server rooms and data centres in the event of a main energy failure, electrical surge or unexpected power cut.

Why do you need an UPS system?

Designed and tested to excel in the most demanding environments. Find everything you need to keep your systems running smoothly. A UPS (Uninterruptible Power Supply) system ensures that critical infrastructure remains operational during power outages, voltage fluctuations, and surges.

How do uninterruptible power supplies work?

For more information, check out our complete guide to uninterruptible power supplies. An online UPS system supplies power by converting incoming AC power to DC and then reconverts it to a stable AC output through an inverter, all while continuously charging the batteries.

What is an ups & how does it work?

A UPS contains a battery that supplies power for a limited time, allowing users to save work or safely shut down systems during power disruptions. UPS devices are essential for ensuring data integrity and preventing damage to sensitive equipment. For more information, check out our complete guide to uninterruptible power supplies.
