What size inverter should I choose for 12V60ah

Overview

How big should a solar inverter be?

Generally, it's recommended to size the inverter to 80-100% of the DC system's rated capacity. Before determine the inverter size, the most important thing is to calculate your average daily power consumption (kWh) and calculate your solar panel array size to match your power consumption. You could follow our to make this estimation.

How do I choose a rated inverter?

You must consider this to select an appropriately rated inverter. A straightforward method to calculate inverter size is: $\text{Inverter Size (VA)} = \text{Total Wattage (W)} / \text{Power Factor (0.7-0.8)}$ Once calculated, choose the next standard inverter size above your result to ensure safe and efficient operation.

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

How much power does a 12V inverter use?

Standard 12v models top out around 3000w (24v/48v ~ 4000w). To proceed: Upgrade to a higher-voltage system (24 V/48 V) for a larger inverter. Consider a higher-voltage system for a bigger inverter. Pick your appliances. Use the dropdown to add common devices—or enter your own custom items.
