Where is battery storage used in Australia?

In Australia, battery storage for renewable energy is increasingly used in a variety of designs, purposes, sizes and locations. Batteries are used in – The fringes of the grid (areas of poor connection) or off grid (e.g. in microgrids).

What is battery storage?

Battery storage involves the use of a battery to store energy for use when required. Technically, it is the conversion of electrical energy into chemical potential energy for storage followed by reconversion of chemical potential energy into electrical energy when desired.

Do I need a battery storage system in Australia?

The Building Code of Australia (BCA) as part of the National Construction Code (NCC) and various Australian Standards will need to be complied with. The electricity network provider will need to be consulted for any grid-connected battery storage system and will most likely stipulate any requirements specific to your site.
