## Overview

---

What is a 21700 battery?

A 21700 battery is a high capacity lithium ion rechargeable battery. Their proper name is a “21700 cell”. The 21700 cell has voltage of 3.7v and has between 3000 mAh and 5100 mAh (mili-amp-hours). The 21700 is physically larger than an 18650 battery, and AA/AAA batteries.

What is the difference between protected and unprotected 21700 batteries?

Protected 21700 Batteries: Feature an integrated protection circuit to prevent overcharging, over-discharging, and short circuits. These are slightly longer than standard 21700 cells. Unprotected 21700 Batteries: Designed for battery packs or high-performance applications where external battery management systems (BMS) handle protection.

Are all 21700 cells the same?

Not all 21700 cells are built the same. Some are optimized for high capacity (great for long runtime), while others are tuned for high discharge rates (better for power-hungry tools or drones). There’s a fun discussion I came across where hobbyists compared popular options.

Does Amazon have a 21700 battery?

Right now Amazon does not have a lot. Battery Junction and Nitecor e have inventory. Capacity: If you see anything above 5100mah for a 21700 battery be suspicious. It is likely false advertising. Protected vs Unprotected: Make sure you are comparing PROTECTED or UNPROTECTED. The electronics of the PROTECTED batteries adds cost.
