# Which one should I buy solar or energy storage

## Overview

---

Is it worth getting a solar storage battery?

A solar battery allows you to store electricity produced by your solar panels and use it later or, in some cases, sell it back to the grid to make a few quid – but they're not cheap. Read on to see if it's worth getting a solar storage battery for your home. This is the first incarnation of this guide.

How do I choose a solar battery storage system?

When choosing and installing a solar battery storage system, make sure your installer is signed up to the Renewable Energy Consumer code (RECC) or the Home Insulation and Energy Systems Contractor Scheme (HIES), as this means you'll be covered should you need to make a complaint or claim.

What are residential solar energy systems paired with battery storage?

Residential solar energy systems paired with battery storage—generally called solar-plus-storage systems—provide power regardless of the weather or the time of day without having to rely on backup power from the grid. Check out some of the benefits. This battery system is paired with a residential rooftop solar array in Arizona.

Should I add more solar panels or batteries to my home energy system?

To understand whether it's better to add more solar panels or batteries to your home energy system, it's a good idea to know exactly how these devices work individually and together. Solar panels convert sunlight into electricity, which can be used to power your home directly.
