Will the price of energy storage continue to fall

Overview

How much does battery storage cost in 2024?

In its latest annual Levelised Cost of Electricity report, BNEF says the global benchmark cost for stand-alone battery storage projects fell by a third in 2024 to \$US104 per megawatt-hour (MWh), as a glut in supply due to slower electric vehicle sales led to cheaper prices.

How much does a battery storage system cost?

Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from 2023 numbers to US\$165/kWh in 2024.

Will energy storage growth continue through 2025?

With developers continuing to add new capacity, including 9.2 GW of new lithium-ion battery storage capacity in 2024 through November 2024 and comparable levels of growth expected through the fourth quarter of 2024, energy storage investments and M&A activity are expected to continue this trajectory through 2025.

Will US energy storage growth slow down in 2026?

That means costs in 2026 would return back to 2024 levels which could slow down the growth in US energy storage deployments, but the analyst says that even so, BNEF anticipates that the momentum of the country's energy storage industry and growth in deployments would remain strong.

Will the price of energy storage continue to fall

In its latest annual Levelised Cost of Electricity report, BNEF says the global benchmark cost for stand-alone battery storage projects fell by a third in 2024 to \$US104 per megawatt-hour (MWh), as a glut in supply due to slower electric vehicle sales led to cheaper prices.

Around the beginning of this year, BloombergNEF (BNEF) released its annual Battery Storage System Cost Survey, which found that global average turnkey energy storage system prices had fallen 40% from 2023 numbers to US\$165/kWh in 2024.

With developers continuing to add new capacity, including 9.2 GW of new lithium-ion battery storage capacity in 2024 through November 2024 and comparable levels of growth expected through the fourth quarter of 2024, energy storage investments and M&A activity are expected to continue this trajectory through 2025.

That means costs in 2026 would return back to 2024 levels which could slow down the growth in US energy storage deployments, but the analyst says that even so, BNEF anticipates that the momentum of the country's energy storage industry and growth in deployments would remain strong.

BloombergNEF's latest survey shows battery pack prices will drop 3% to \$105/kWh in 2026. Chinese manufacturing overcapacity, LFP technology transition, and intense market ...

10 hours ago Battery storage costs have fallen to \$65/MWh, making solar plus storage economically viable for reliable, dispatchable clean power.

BNEF analyst Isshu Kikuma discusses trends and market dynamics impacting the cost of

energy storage in 2024 with ESN Premium.

According to BNEF, battery pack prices for stationary storage fell to \$70/kWh in 2025, a 45% decrease from 2024. This represents the ...

According to BNEF, battery pack prices for stationary storage fell to \$70/kWh in 2025, a 45% decrease from 2024. This represents the steepest decline among all lithium-ion ...

This report comes to you at the turning of the tide for energy storage: after two years of rising prices and supply chain disruptions, the energy storage industry is starting to see price ...

Ember, the energy think tank, reports that the cost of storing electricity from daytime solar to deliver reliable power anytime has fallen significantly. As of October 2025, the cost of ...

By 2035, this is expected to fall further to \$25 per MWh, marking a 31% drop. Battery energy storage LCOE is also forecast to ...

The global cost of clean power technologies will continue its fall into 2025, with wind, solar and battery technologies expected to ...

BNEF analyst Isshu Kikuma discusses trends and market dynamics impacting the cost of energy storage in 2024 with ESN Premium.

18 hours ago Energy storage system prices have fallen to their lowest level on record, dropping to a global average of \$117/kWh in 2025.

New BNEF report expects the cost of clean power technologies to fall by between 2-11% in 2025, breaking last year's record ...

New BNEF report expects the cost of clean power technologies to fall by between 2-11% in 2025, breaking last year's record and sending batteries below major benchmark.

By 2035, this is expected to fall further to \$25 per MWh, marking a 31% drop. Battery energy storage LCOE is also forecast to decline, falling 11% from \$104 per MWh in ...

The global cost of clean power technologies will continue its fall into 2025, with wind, solar and battery technologies expected to experience additional drops of between 2% ...
