

# **Wind-resistant Agreement for Energy Storage Containers Used in Schools**

## Overview

---

What is the wind for Schools project?

The U.S. Department of Energy funds the Wind for Schools project, which helps develop a future wind energy workforce by engaging students at higher education institutions to join Wind Application Centers and serve as project consultants for small wind turbine installations at rural elementary and secondary schools.

How does wind for schools work?

Teacher training and hands-on curricula are implemented at each K-12 host school to bring the wind turbine into the classroom through interactive and interschool research tasks, engaging young people interested in science. The Wind for Schools project goals are to: Introduce teachers and students to wind energy.

What are school energy storage initiatives?

School energy storage initiatives encompass various strategies aimed at harnessing and managing energy for educational facilities. 1. These projects integrate renewable energy sources, 2. enhance grid resilience, 3. reduce operational costs, and 4. promote sustainability education.

What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.
