## Overview

---

Should offshore floating PV plants be integrated with offshore wind plants?

The integration of offshore floating PV plants and offshore wind plants is ideal (Silalahi and Blakers, 2023). The natural complementarity of them from summertime to wintertime is conducive to the relative stability of the current output.

Can floating photovoltaics be optimized for offshore use?

A team of scientists from China and the United States studied ways to optimize floating photovoltaics for offshore use. It found that the robustness of the systems was influenced by the size and number of platforms, as well as the types of connections between platforms.

How flexible structures can be used for offshore floating PV arrays?

Flexible structures are applicable for large-area offshore floating PV arrays to weaken the wave loads. The wind loads can be evaluated based on wind tunnel testing, digital simulation, and can be minimized by reasonably designed especially the shape of the floating body and the incidence angle of the wind. 3.

What anchoring systems are used in offshore PV plants?

According to traditional marine anchoring systems, dead weights, drag anchors, embedded anchors or suction foundations are all taken into account for the offshore floating PV plants (see Figure 9).
